

Wireless Printing

Print from iPhone, iPad, Android

1. Install the "PrinterON" app. You can download it free from the App Store or Play Store, or directly from printeron.com.
2. When you open the app, tap the "No Printer Selected" message. Search for Kitchener Public Library and you will see a list of printers at all locations. Alternately, you may use the Location feature to narrow the list to only the printers near you.
3. Select the printer you want to use. You will see options to print documents, photos, or webpages. You can also print email attachments.
 - a. Documents / Photos: Select a document or a photo from your device. A preview will appear. Tap the Print button to send the document or photo to the printer.
 - b. From the web: Enter the address (url) of the webpage you want to print. The webpage will appear on the screen. Tap the printer icon at the top-right to see a preview. Tap the Print button to send the page(s) to the printer.
 - c. Email attachments: Open the email attachment. You can send it directly to the PrinterOn app using the Open With option, or the sharing options on your device.
4. Enter a name to appear in the Print Manager queue, and send the print job. You should receive a notification on your device when the Print Manager receives the job, and when it is ready to print.

Note: Large files, such as colour photographs, may take several minutes to appear on the Print Manager screen.
